

January 2022

To whom it may concern:

My name is Daniel Doktori and I am the Chief of Staff and General Counsel of Credly, a software company based in the United States serving thousands of customers including Google, Facebook, Amazon, McKinsey, and PwC. I am responsible for Credly's security council which ensures Credly's software offers an enterprise-grade data security and privacy program. The security council operates a bug bounty program whereby individuals outside of the company may identify potential weaknesses in our security architecture in exchange for payment.

I write this letter in recognition of the work completed by MD Amiruddin. Mr. Amiruddin identified a meaningful bug relating to user identity verification. Our team was able to use the information provided by Mr. Amiruddin to patch the vulnerability and to ensure continued security of our platform. We were pleased to reward Mr. Amiruddin with one of the largest bug bounties we have ever offered.

Mr. Amiruddin displayed personal integrity in bringing the bug to our attention rather than attempting to exploit the vulnerability or sell information related to the vulnerability. With this letter we indicate our appreciation of his work and his technical skill. We wish him the best in his future career.

Sincerely,

A handwritten signature in black ink, appearing to read 'D. Doktori', is written over a horizontal line.

Daniel Doktori
Chief of Staff & General Counsel
